## Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

## **Listing of Claims:**

1. (currently amended) A system for multiuser detection of a received signal, the received signal including voice signals and data signals, said system

comprising:

a first detector having an input to receive the received signal and an output,

said first detector extracting the data signals from the received signal;

a hard decision converter having an input connected to said first detector

output and an output, said hard decision converter converting soft symbols output

by said first detector into hard symbols;

an interference canceller having a first input configured to receive the

received signal and a second input connected to said hard decision converter output,

and an output, said interference canceller canceling a contribution of the data

signals from the received signal; and

a second detector having an input connected to said interference canceller

output, said second detector extracting individual voice signals, said second detector

being a different detector type than said first detector;

Applicant: 10/731,456

Application No.: Reznik et al.

wherein said first detector is a blind minimum mean square error detector

and said second detector is a matched filter or a RAKE-receiver.

2. (original) The system according to claim 1, further comprising a data

buffer having an input to receive the received signal and an output coupled to the

first input of the interference canceller.

3. (original) The system according to claim 1, wherein said first detector

output is also connected to a symbol processing device; and said second detector

output is connected to said symbol processing device.

4. (canceled).

5. (canceled).

6. (canceled).

7. (original) A method for multiuser detection of a received signal, the

received signal including voice signals and data signals, the method comprising the

steps of:

• 3 •

Applicant: 10/731,456 Application No.: Reznik et al.

storing the received signal;

detecting the data signals and extracting the data signals from the received signal;

outputting the extracted data signals as soft symbols;

converting the soft symbols into hard symbols;

canceling the hard symbols from the stored received signal to extract the voice signals; and

detecting the individual voice signals, wherein the first and second detecting steps are performed by different types of detectors.

- 8. (original) The method according to claim 7, wherein the first detecting step includes using a blind minimum mean square error detector.
- 9. (original) The method according to claim 7, wherein the second detecting step includes using a matched filter.
- 10. (currently amended) The method according to claim 7 9, wherein the second detecting step includes using a RAKE-<u>receiver</u>.
  - 11. (currently amended) A receiver comprising:

**Applicant:** 10/731,456

Application No.: Reznik et al.

an antenna for receiving a plurality of communication signals of differing

power levels, the plurality of communication signals including a high power level

group of signals and a low power level group of signals;

a high data rate data detection device for detecting data of the high power

level group of signals;

an interference canceling device for receiving the detected data of the high

power level group of signals and canceling a contribution of the high power level

group detected data from the plurality of communication signals, as an interference

canceled signal; and

a low data rate data detection device for detecting data of the low power level

group of signals from the interference canceled signal;

wherein the high data rate data detection device comprises a blind minimum

means square error data detection device and the low data rate data detection

device comprises a matched filter or a Rake-receiver.

12. (canceled).

13. (canceled).

14. (canceled).

· 5 ·

Applicant: 10/731,456 Application No.: Reznik et al.

15. (canceled).

16. (currently amended) A wireless transmit/receive unit (WTRU)

comprising:

means for receiving a plurality of communication signals of differing power

levels, the plurality of communication signals including a high power level group of

signals and a low power level group of signals;

means for detecting data of the high power level group of signals;

high power level means for receiving the detected data of the high power level

group of signals and canceling a contribution of the high power level group detected

data from the plurality of communication signals, as an interference canceled

signal; and

low power level means for detecting data of the low power level group of

signals from the interference canceled signal;

wherein the high power means comprises a blind minimum means square

error data detection device and the low power means comprises a matched filter or a

RAKE-receiver.

17. (canceled).

- 6 -

Applicant: 10/731,456 Application No.: Reznik et al.

- 18. (canceled).
- 19. (canceled).
- 20. (canceled).
- 21. (currently amended) An integrated circuit comprising:

an input for receiving a plurality of communication signals of differing power levels, the plurality of communication signals including a high power level group of signals and a low power level group of signals;

a high data rate data detection device for detecting data of the high power level group of signals;

an interference canceling device for receiving the detected data of the high power level group of signals and canceling a contribution of the high power level group detected data from the plurality of communication signals, as an interference canceled signal; and

a low data rate data detection device for detecting data of the low power level group of signals from the interference canceled signal;

Applicant: 10/731,456 Application No.: Reznik et al.

wherein the high data rate data detection device comprises a blind minimum

means square error data detection device and the low data rate data detection

device comprises a matched filter or a RAKE-receiver.
